

Public Policy for the Poor? A Randomized Evaluation of the Mexican Universal Health Insurance Program

Gary King
Institute for Quantitative Social Science
Harvard University

Joint work with Emmanuela Gakidou, Kosuke Imai, Jason Lakin, Ryan T. Moore, Clayton Nall, Nirmala Ravishankar, Manett Vargas, Martha María Téllez-Rojo, Juan Eugenio Hernández Ávila, Mauricio Hernández Ávila, Héctor Hernández Llamas

(Talk at USAID Conference, “Mind the Gap: Research & Evaluation Methods for Scaling Up Evidenced-Based Interventions” 6/1/10)

Seguro Popular Evaluation

Seguro Popular Evaluation

- **Program:** medical services, preventive care, pharmaceuticals, and financial health protection

Seguro Popular Evaluation

- **Program:** medical services, preventive care, pharmaceuticals, and financial health protection
- **Beneficiaries:** 50M Mexicans with no regular access to health care, particularly those with low incomes.

Seguro Popular Evaluation

- **Program:** medical services, preventive care, pharmaceuticals, and financial health protection
- **Beneficiaries:** 50M Mexicans with no regular access to health care, particularly those with low incomes.
- **Result:** Among world's largest health reforms in 2 decades

Seguro Popular Evaluation

- **Program:** medical services, preventive care, pharmaceuticals, and financial health protection
- **Beneficiaries:** 50M Mexicans with no regular access to health care, particularly those with low incomes.
- **Result:** Among world's largest health reforms in 2 decades
- **Politics:** Most visible accomplishment of Fox administration; Major issue in the 2006 presidential campaign

Seguro Popular Evaluation

- **Program:** medical services, preventive care, pharmaceuticals, and financial health protection
- **Beneficiaries:** 50M Mexicans with no regular access to health care, particularly those with low incomes.
- **Result:** Among world's largest health reforms in 2 decades
- **Politics:** Most visible accomplishment of Fox administration; Major issue in the 2006 presidential campaign
- **Evaluation:** Financial protection (money for the poor rarely makes it there), utilization, & health

Seguro Popular Evaluation

- **Program:** medical services, preventive care, pharmaceuticals, and financial health protection
- **Beneficiaries:** 50M Mexicans with no regular access to health care, particularly those with low incomes.
- **Result:** Among world's largest health reforms in 2 decades
- **Politics:** Most visible accomplishment of Fox administration; Major issue in the 2006 presidential campaign
- **Evaluation:** Financial protection (money for the poor rarely makes it there), utilization, & health
- **Size:** The largest randomized health policy experiment in history

Seguro Popular Evaluation

- **Beneficiaries:** 50M Mexicans with no regular access to health care, particularly those with low incomes.
- **Result:** Among world's largest health reforms in 2 decades
- **Politics:** Most visible accomplishment of Fox administration; Major issue in the 2006 presidential campaign
- **Evaluation:** Financial protection (money for the poor rarely makes it there), utilization, & health
- **Size:** The largest randomized health policy experiment in history
- **Problem:** *Most large scale public policy experiments fail!*

Seguro Popular Evaluation

- **Program:** medical services, preventive care, pharmaceuticals, and financial health protection
- **Beneficiaries:** 50M Mexicans with no regular access to health care, particularly those with low incomes.
- **Result:** Among world's largest health reforms in 2 decades
- **Politics:** Most visible accomplishment of Fox administration; Major issue in the 2006 presidential campaign
- **Evaluation:** Financial protection (money for the poor rarely makes it there), utilization, & health
- **Size:** The largest randomized health policy experiment in history
- **Problem:** *Most large scale public policy experiments fail!*
- **Solution:** New evaluation design with fail-safe components

Example of Fail-Safe Design Procedure (CR vs. MPR)

Example of Fail-Safe Design Procedure (CR vs. MPR)

- 1 Complete Randomization (used in Oportunidades evaluation)

Example of Fail-Safe Design Procedure (CR vs. MPR)

- 1 **Complete Randomization** (used in **Oportunidades** evaluation)
 - Flip coin to assign program to each area

Example of Fail-Safe Design Procedure (CR vs. MPR)

- 1 **Complete Randomization** (used in **Oportunidades** evaluation)
 - Flip coin to assign program to each area
 - If one area is lost:

Example of Fail-Safe Design Procedure (CR vs. MPR)

- 1 **Complete Randomization** (used in **Oportunidades** evaluation)
 - Flip coin to assign program to each area
 - If one area is lost:
 - treated and control groups are incomparable

Example of Fail-Safe Design Procedure (CR vs. MPR)

- 1 **Complete Randomization** (used in **Oportunidades** evaluation)
 - Flip coin to assign program to each area
 - If one area is lost:
 - treated and control groups are incomparable
 - all advantages of randomization are gone

Example of Fail-Safe Design Procedure (CR vs. MPR)

- 1 **Complete Randomization** (used in **Oportunidades** evaluation)
 - Flip coin to assign program to each area
 - If one area is lost:
 - treated and control groups are incomparable
 - all advantages of randomization are gone
- 2 **Matched-Pair Randomization** (used in **Seguro Popular** evaluation)

Example of Fail-Safe Design Procedure (CR vs. MPR)

- 1 **Complete Randomization** (used in **Oportunidades** evaluation)
 - Flip coin to assign program to each area
 - If one area is lost:
 - treated and control groups are incomparable
 - all advantages of randomization are gone
- 2 **Matched-Pair Randomization** (used in **Seguro Popular** evaluation)
 - Match areas in pairs on background characteristics

Example of Fail-Safe Design Procedure (CR vs. MPR)

- 1 **Complete Randomization** (used in **Oportunidades** evaluation)
 - Flip coin to assign program to each area
 - If one area is lost:
 - treated and control groups are incomparable
 - all advantages of randomization are gone
- 2 **Matched-Pair Randomization** (used in **Seguro Popular** evaluation)
 - Match areas in pairs on background characteristics
 - Flip coin once for each pair: one area within each pair gets the program

Example of Fail-Safe Design Procedure (CR vs. MPR)

- 1 **Complete Randomization** (used in **Oportunidades** evaluation)
 - Flip coin to assign program to each area
 - If one area is lost:
 - treated and control groups are incomparable
 - all advantages of randomization are gone
- 2 **Matched-Pair Randomization** (used in **Seguro Popular** evaluation)
 - Match areas in pairs on background characteristics
 - Flip coin once for each pair: one area within each pair gets the program
 - If one area is lost:

Example of Fail-Safe Design Procedure (CR vs. MPR)

- 1 **Complete Randomization** (used in **Oportunidades** evaluation)
 - Flip coin to assign program to each area
 - If one area is lost:
 - treated and control groups are incomparable
 - all advantages of randomization are gone
- 2 **Matched-Pair Randomization** (used in **Seguro Popular** evaluation)
 - Match areas in pairs on background characteristics
 - Flip coin once for each pair: one area within each pair gets the program
 - If one area is lost:
 - Drop the other member of the pair

Example of Fail-Safe Design Procedure (CR vs. MPR)

- 1 **Complete Randomization** (used in **Oportunidades** evaluation)
 - Flip coin to assign program to each area
 - If one area is lost:
 - treated and control groups are incomparable
 - all advantages of randomization are gone
- 2 **Matched-Pair Randomization** (used in **Seguro Popular** evaluation)
 - Match areas in pairs on background characteristics
 - Flip coin once for each pair: one area within each pair gets the program
 - If one area is lost:
 - Drop the other member of the pair
 - Remaining pairs are kept

Example of Fail-Safe Design Procedure (CR vs. MPR)

- 1 **Complete Randomization** (used in **Oportunidades** evaluation)
 - Flip coin to assign program to each area
 - If one area is lost:
 - treated and control groups are incomparable
 - all advantages of randomization are gone
- 2 **Matched-Pair Randomization** (used in **Seguro Popular** evaluation)
 - Match areas in pairs on background characteristics
 - Flip coin once for each pair: one area within each pair gets the program
 - If one area is lost:
 - Drop the other member of the pair
 - Remaining pairs are kept
 - Treated and control groups are still protected by randomization: advantages of the experiment survives

Example of Fail-Safe Design Procedure (CR vs. MPR)

- 1 **Complete Randomization** (used in **Oportunidades** evaluation)
 - Flip coin to assign program to each area
 - If one area is lost:
 - treated and control groups are incomparable
 - all advantages of randomization are gone
- 2 **Matched-Pair Randomization** (used in **Seguro Popular** evaluation)
 - Match areas in pairs on background characteristics
 - Flip coin once for each pair: one area within each pair gets the program
 - If one area is lost:
 - Drop the other member of the pair
 - Remaining pairs are kept
 - Treated and control groups are still protected by randomization: advantages of the experiment survives
 - With our new statistical methods, the design:

Example of Fail-Safe Design Procedure (CR vs. MPR)

- 1 **Complete Randomization** (used in **Oportunidades** evaluation)
 - Flip coin to assign program to each area
 - If one area is lost:
 - treated and control groups are incomparable
 - all advantages of randomization are gone
- 2 **Matched-Pair Randomization** (used in **Seguro Popular** evaluation)
 - Match areas in pairs on background characteristics
 - Flip coin once for each pair: one area within each pair gets the program
 - If one area is lost:
 - Drop the other member of the pair
 - Remaining pairs are kept
 - Treated and control groups are still protected by randomization: advantages of the experiment survives
 - With our new statistical methods, the design:
 - **More efficient**: up to 38 times!

Example of Fail-Safe Design Procedure (CR vs. MPR)

- 1 **Complete Randomization** (used in **Oportunidades** evaluation)
 - Flip coin to assign program to each area
 - If one area is lost:
 - treated and control groups are incomparable
 - all advantages of randomization are gone
- 2 **Matched-Pair Randomization** (used in **Seguro Popular** evaluation)
 - Match areas in pairs on background characteristics
 - Flip coin once for each pair: one area within each pair gets the program
 - If one area is lost:
 - Drop the other member of the pair
 - Remaining pairs are kept
 - Treated and control groups are still protected by randomization: advantages of the experiment survives
 - With our new statistical methods, the design:
 - **More efficient**: up to 38 times!
 - **Smaller standard errors**: up to 6 times smaller

Example of Fail-Safe Design Procedure (CR vs. MPR)

- 1 **Complete Randomization** (used in **Oportunidades** evaluation)
 - Flip coin to assign program to each area
 - If one area is lost:
 - treated and control groups are incomparable
 - all advantages of randomization are gone
- 2 **Matched-Pair Randomization** (used in **Seguro Popular** evaluation)
 - Match areas in pairs on background characteristics
 - Flip coin once for each pair: one area within each pair gets the program
 - If one area is lost:
 - Drop the other member of the pair
 - Remaining pairs are kept
 - Treated and control groups are still protected by randomization: advantages of the experiment survives
 - With our new statistical methods, the design:
 - **More efficient**: up to 38 times!
 - **Smaller standard errors**: up to 6 times smaller
 - **We can find effects where complete randomization cannot**

Example of Fail-Safe Design Procedure (CR vs. MPR)

- 1 **Complete Randomization** (used in **Oportunidades** evaluation)
 - Flip coin to assign program to each area
 - If one area is lost:
 - treated and control groups are incomparable
 - all advantages of randomization are gone
- 2 **Matched-Pair Randomization** (used in **Seguro Popular** evaluation)
 - Match areas in pairs on background characteristics
 - Flip coin once for each pair: one area within each pair gets the program
 - If one area is lost:
 - Drop the other member of the pair
 - Remaining pairs are kept
 - Treated and control groups are still protected by randomization: advantages of the experiment survives
 - With our new statistical methods, the design:
 - **More efficient**: up to 38 times!
 - **Smaller standard errors**: up to 6 times smaller
 - **We can find effects where complete randomization cannot**
 - **Far less expensive** for the same impact

Detailed Design Summary

Detailed Design Summary

- 1 Define 12,284 “health clusters” that tile Mexico’s 31 states; each includes a health clinic and catchment area

Detailed Design Summary

- 1 Define 12,284 “health clusters” that tile Mexico’s 31 states; each includes a health clinic and catchment area
- 2 Persuaded 13 of 31 states to participate (7,078 clusters)

Detailed Design Summary

- 1 Define 12,284 “health clusters” that tile Mexico’s 31 states; each includes a health clinic and catchment area
- 2 Persuaded 13 of 31 states to participate (7,078 clusters)
- 3 Match clusters in pairs on background characteristics.

Detailed Design Summary

- 1 Define 12,284 “health clusters” that tile Mexico’s 31 states; each includes a health clinic and catchment area
- 2 Persuaded 13 of 31 states to participate (7,078 clusters)
- 3 Match clusters in pairs on background characteristics.
- 4 Select 74 pairs (based on necessary political criteria, closeness of the match, likelihood of compliance)

Detailed Design Summary

- 1 Define 12,284 “health clusters” that tile Mexico’s 31 states; each includes a health clinic and catchment area
- 2 Persuaded 13 of 31 states to participate (7,078 clusters)
- 3 Match clusters in pairs on background characteristics.
- 4 Select 74 pairs (based on necessary political criteria, closeness of the match, likelihood of compliance)
- 5 Randomly assign one in each pair to receive encouragement to affiliate, better health facilities, drugs, and doctors

Detailed Design Summary

- 1 Define 12,284 “health clusters” that tile Mexico’s 31 states; each includes a health clinic and catchment area
- 2 Persuaded 13 of 31 states to participate (7,078 clusters)
- 3 Match clusters in pairs on background characteristics.
- 4 Select 74 pairs (based on necessary political criteria, closeness of the match, likelihood of compliance)
- 5 Randomly assign one in each pair to receive encouragement to affiliate, better health facilities, drugs, and doctors
- 6 Survey $\approx 32,000$ random households in 50 of the 74 treated and control unit pairs

Detailed Design Summary

- 1 Define 12,284 “health clusters” that tile Mexico’s 31 states; each includes a health clinic and catchment area
- 2 Persuaded 13 of 31 states to participate (7,078 clusters)
- 3 Match clusters in pairs on background characteristics.
- 4 Select 74 pairs (based on necessary political criteria, closeness of the match, likelihood of compliance)
- 5 Randomly assign one in each pair to receive encouragement to affiliate, better health facilities, drugs, and doctors
- 6 Survey $\approx 32,000$ random households in 50 of the 74 treated and control unit pairs
- 7 Repeat surveys in 10 months and subsequently to see effects

Remaining in study: 148 clusters (74 pairs) in 7 states

Matched Pairs, Estado de México

Design and Analysis Strategy is Triply Robust

Design and Analysis Strategy is Triply Robust

Design has three parts

Design and Analysis Strategy is Triply Robust

Design has three parts

- 1 Matching pairs on observed covariates

Design and Analysis Strategy is Triply Robust

Design has three parts

- 1 Matching pairs on observed covariates
- 2 Randomization of treatment within pairs

Design and Analysis Strategy is Triply Robust

Design has three parts

- 1 Matching pairs on observed covariates
- 2 Randomization of treatment within pairs
- 3 If necessary statistically adjust for differences

Design and Analysis Strategy is Triply Robust

Design has three parts

- 1 Matching pairs on observed covariates
- 2 Randomization of treatment within pairs
- 3 If necessary statistically adjust for differences

Triple Robustness

If matching **or** randomization **or** statistical analysis is right, but the other two are wrong, results are still unbiased

Design and Analysis Strategy is Triply Robust

Design has three parts

- 1 Matching pairs on observed covariates
- 2 Randomization of treatment within pairs
- 3 If necessary statistically adjust for differences

Triple Robustness

If matching **or** randomization **or** statistical analysis is right, but the other two are wrong, results are still unbiased

Two Additional Checks if Triple Robustness Fails

Design and Analysis Strategy is Triply Robust

Design has three parts

- 1 Matching pairs on observed covariates
- 2 Randomization of treatment within pairs
- 3 If necessary statistically adjust for differences

Triple Robustness

If matching **or** randomization **or** statistical analysis is right, but the other two are wrong, results are still unbiased

Two Additional Checks if Triple Robustness Fails

- 1 If one of the three works, then “effect of SP” on time 0 outcomes (measured in baseline survey) must be zero

Design and Analysis Strategy is Triply Robust

Design has three parts

- 1 Matching pairs on observed covariates
- 2 Randomization of treatment within pairs
- 3 If necessary statistically adjust for differences

Triple Robustness

If matching **or** randomization **or** statistical analysis is right, but the other two are wrong, results are still unbiased

Two Additional Checks if Triple Robustness Fails

- 1 If one of the three works, then “effect of SP” on time 0 outcomes (measured in baseline survey) must be zero
- 2 If we lose pairs, we check for selection bias by rerunning this check

Summary of Results

Summary of Results

- Positive effects detected now:

Summary of Results

- Positive effects detected now:
 - Catastrophic expenditures slashed

Summary of Results

- Positive effects detected now:
 - Catastrophic expenditures slashed
 - Out-of-pocket expenditures drastically reduced

Summary of Results

- Positive effects detected now:
 - Catastrophic expenditures slashed
 - Out-of-pocket expenditures drastically reduced
 - High citizen satisfaction

Summary of Results

- Positive effects detected now:
 - Catastrophic expenditures slashed
 - Out-of-pocket expenditures drastically reduced
 - High citizen satisfaction

 - High citizen satisfaction
- Positive effects not (yet?) seen:
 - Expenditures on medicines

Summary of Results

- Positive effects detected now:
 - Catastrophic expenditures slashed
 - Out-of-pocket expenditures drastically reduced
 - High citizen satisfaction
- Positive effects not (yet?) seen:
 - Expenditures on medicines
 - Utilization (preventative and procedures)

Summary of Results

- Positive effects detected now:
 - Catastrophic expenditures slashed
 - Out-of-pocket expenditures drastically reduced
 - High citizen satisfaction
- Positive effects not (yet?) seen:
 - Expenditures on medicines
 - Utilization (preventative and procedures)
 - Risk factors

Summary of Results

- **Positive effects detected now:**
 - Catastrophic expenditures slashed
 - Out-of-pocket expenditures drastically reduced
 - High citizen satisfaction
- **Positive effects not (yet?) seen:**
 - Expenditures on medicines
 - Utilization (preventative and procedures)
 - Risk factors
- **Other findings:**

Summary of Results

- **Positive effects detected now:**
 - Catastrophic expenditures slashed
 - Out-of-pocket expenditures drastically reduced
 - High citizen satisfaction
- **Positive effects not (yet?) seen:**
 - Expenditures on medicines
 - Utilization (preventative and procedures)
 - Risk factors
- **Other findings:**
 - Only 66% of automatically affiliated Oportunidades respondents were aware of this fact

Summary of Results

- **Positive effects detected now:**
 - Catastrophic expenditures slashed
 - Out-of-pocket expenditures drastically reduced
 - High citizen satisfaction
- **Positive effects not (yet?) seen:**
 - Expenditures on medicines
 - Utilization (preventative and procedures)
 - Risk factors
- **Other findings:**
 - Only 66% of automatically affiliated Oportunidades respondents were aware of this fact
 - Low affiliation rates for the poor submerged within wealthier areas

Summary of Results

- **Positive effects detected now:**
 - Catastrophic expenditures slashed
 - Out-of-pocket expenditures drastically reduced
 - High citizen satisfaction
- **Positive effects not (yet?) seen:**
 - Expenditures on medicines
 - Utilization (preventative and procedures)
 - Risk factors
- **Other findings:**
 - Only 66% of automatically affiliated Oportunidades respondents were aware of this fact
 - Low affiliation rates for the poor submerged within wealthier areas
 - Developed new and more powerful evaluation design and statistical methods, tuned to the needs of Mexico

Summary of Results

- **Positive effects detected now:**
 - Catastrophic expenditures slashed
 - Out-of-pocket expenditures drastically reduced
 - High citizen satisfaction
- **Positive effects not (yet?) seen:**
 - Expenditures on medicines
 - Utilization (preventative and procedures)
 - Risk factors
- **Other findings:**
 - Only 66% of automatically affiliated Oportunidades respondents were aware of this fact
 - Low affiliation rates for the poor submerged within wealthier areas
 - Developed new and more powerful evaluation design and statistical methods, tuned to the needs of Mexico
 - Evaluation design: being adopted around the world
